

## Meshing of complex Microstructures in Abaqus/Ansys/Hypermesh...

Microstructures such as multi-phase structures, made of crystallines with inter-crystalline layers, or granular inclusions with soft matrices require particular attention to their FE-meshes.

Those type of microstructure can be constructed on an artificial basis and meshed with commercial tools such as Abaqus, Ansys, Hypermesh and so on.

The objective of the job is to do that meshing.

### Requirements:

Expertise in commercial tools for meshing of complex structures, such as Abaqus, Ansys, Hypermesh, etc.

### Start:

As soon as possible
