

Machine learning and uncertainty quantification

Are you interested in contributing to the development and the application of numerical modelling?

We are looking for motivated research assistant in the area of solid mechanics.

Applicants with background in physics, materials science, mechanics, engineering, and mathematics and with an affinity to the finite element and numerical methods are encouraged to apply.

The research topic: machine learning and uncertainty quantification for computational material design.

Interested candidates should send a short motivation with CV by Email.

Contact:

Dr.-Ing. Khader Hamdia

hamdia@ikm.uni-hannover.de

Requirements:

-Basic knowledge of finite element, mathematical modelling.

Start:

As soon as possible
